**EMAC**<sup>®</sup>  
THE FINAL TOUCH

We are a multinational family Group that focus its activity in two divisions: the artistic division with **Artelux 1969** and **Arteluxcontract**, and the construction division with **EMAC**. At **Artelux** we work with hand painted tiles for commercial interior design, labeling, hotel trade... And at **EMAC**, with profiles, expansion joints and other solutions for walls and floor tiles. Our leadership vocation, experience and professionalization has helped us to consolidate our Group as the Spanish leader in the sector.

## PROTECTION CORNER SOLUTIONS

Doing mitre joints is the main cause of tiled corner breakage, primarily in public buildings and high transit areas.

We offer you the widest range of finish off profiles and trims, in many kind of materials and finished, to protect corners and tiled installations. Profiles for indoors or outdoors, wet areas or sun exposure, for new building or renovation, for rustic or modern decoration... with their correspondent complementary pieces to get a perfect finish off.

We point out the Novobisel<sup>®</sup> range of differentiated geometry and with an innovative bevel effect. Moreover, in section 2 "Listels and finish off solutions" you may find several types of highly decorative profiles that can be also used to protect and decorate corners with a modern look.

# 01

Our Technical Department ([tecnico@emac.es](mailto:tecnico@emac.es)) may assist you choosing the most appropriate profile ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the **Norm UNE 138002:2017** (General Regulations for the execution of wall and floor tiles by adhesion).

## LISTELS AND DECORATIVE FINISH OFF SOLUTIONS

A profile by itself can print a touch of distinction to any space. We offer you a wide range of listels and decorative solutions to reach the perfect finish off in all kind of projects.

Profiles in various materials, multiple sizes and finishes to decorate any atmosphere: rustic, modern, classic, avant-garde... Elegant high quality solutions for any kind of application: separate areas, embellish joints, framing decorations, mouldings for half-tiled walls...

Due to its modern straight lines and its polivalence we outline the Novolistel® 3 and the spectacular Maxisahara range that adds beauty and protection to the corners with the innovative finish of MaxiKenya and MaxiDakar ranges. For minimalist environments the Novolistel® 3 XS is the perfect choice.

# 02

Our Technical Department ([tecnico@emac.es](mailto:tecnico@emac.es)) may assist you choosing the most appropriate profile ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the Norm UNE 138002:2017 (General Regulations for the execution of wall and floor tiles by adhesion).

## SKIRTINGS SOLUTIONS

EMAC® counts with a wide range of skirtings in different materials, multiple sizes and finishes. A perfect combination between functionality and design that allows our profiles to fit in any ambient.

We offer you elegant metallic skirtings in stainless steel or aluminium, as well as skirtings in our exclusive material Maxi.

We highlight the Novorodapie Eclipse®, an aluminium skirting specially designed to be installed with plasterboards obtaining as a result a gap on the wall according to the last tendencies with the possibility to install an LED strip. Also, the Novorodapie Maxisoho®, reinventing the maxi family with this new skirting highly decorative and with a unique and exclusive finish.

# 03

Our Technical Department ([tecnico@emac.es](mailto:tecnico@emac.es)) may assist you choosing the most appropriate profile ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the Norm UNE 138002:2017 (General Regulations for the execution of wall and floor tiles by adhesion).

## Novorodapie Maxisoho<sup>®</sup>

a: 80 mm  
h: 12'3 mm  
length: 2'5 m

With the installation  
of Novosuelo

Skirting profile made of Maxi, an exclusive EMAC<sup>®</sup> material wich consists in PVC with vegetable fibers proceeding from organic waste recycling. Its design, with simple and clean lines, makes contrast with the innovative finish similar to Wood from the MaxiSoho range, being suitable for multiple environments and trends. Each profile is unique and different from others. Not two profiles are the same.

- Novorodapie<sup>®</sup> Rehabit with profile for placement

To be placed without an old skirting, we recommend the use: a: 80 mm – A profile for placement for each skirting (2 m). a: 120 mm - Two profiles for placement for each skirting (2 m).

## Novorodapie<sup>®</sup> Rehabit

Reg. 1685256-7

h: 13'9, 23'8 mm  
a: 80, 120 mm  
length: 2 m

Aluminium skirting with a modern design, very decorative and elegant. It can be easily placed on an old skirting, saving time in Rehabilitation works. To be placed on a wall without an old skirting, we recommend the use of the especial "fastening pieces" to support the profile, easily allowing a perfect placement.

## Novorodapie® Semiflex

Skirting manufactured in semi-rigid, flexible PVC. It adapts to the irregularities of the walls. Thanks to its flexibility, it can also be installed in a curve. It incorporates beading scotia along its lower edge to aid cleaning, which makes it ideal for buildings with high demands in hygiene such as hospitals, schools, shopping centres, etc. Fixing with adhesive installation or similar.

## DIVIDER FLOORING SOLUTIONS

At this section, you will find our Novosepara Range, functional profiles created to divide ceramic floors from other materials (marble, granite, wooden floors, carpet...), or delimitate areas in a decorative way. Protecting ceramic borders and beautifying joints. They are available in multiple shapes, materials and finishes to fit with all kind of tendencies.

To save slopes between different floorings in a save way, we offer your our Novonivel<sup>®</sup> range, pointing out the Novonivel<sup>®</sup> Forte with a large non-slip surface that fulfils the CTE (Spanish Technical Building Code) standards about accessibility ramps.

# 04

Our Technical Department ([tecnico@emac.es](mailto:tecnico@emac.es)) may assist you choosing the most appropriate profile ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the Norm UNE 138002:2017 (General Regulations for the execution of wall and floor tiles by adhesion).

## STAIR NOSING SOLUTIONS

Novopeldaño® profiles are the perfect solution to finish off any kind of stair nosing, designed to avoid breakages, providing a higher level of safety against slippery and giving an excellent finishing touch.

- Aluminium steps with PVC tread, non-slip strip or photoluminescent strip, to help the fulfilment of Safety Use Regulations, keeping the same slip resistant as the pavement or invent increasing it.
- Entirely metallic Stair nosing, in stainless steel, aluminium or brass, for the most avant-garde architecture.
- Natural wood stair nosing to create a warm atmosphere with a noble touch, perfect for ceramic tiles, parquet and other natural floor coverings.
- Stair nosing made of Maxi, our exclusive material, with a unique irregular appearance that depending on its geometry, allows its perfect integration in any kind of ambiance. With the range Maxikenya, Maxidakar for outdoors and Maxi and Maxitokyo for indoors. This exclusive range of EMAC® is completed with the Novopeldaño Maxisoho®, profiles of a unique and innovative finish. Not two profiles are the same.

\* Product tested against impacts and loading capacity

# 05

Our Technical Department ([tecnico@emac.es](mailto:tecnico@emac.es)) may assist you choosing the most appropriate Novopeldaño® ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) referred to other regulatory Laws to the Accessibility and Security conditions, and the recommendations included in the **Norm UNE 138002:2017** (General Regulations for the execution of wall and floor tiles by adhesion).

## Novopeldaño Maxisoho®

h: 10, 12 mm  
length: 1 / 2'5 m\*

Suitable for outdoors

Recommended use: outdoor and indoor.

With the exclusive MAXI material of EMAC®, a WPC composed by PVC and vegetal fibers arising from recycled agricultural waste, together with a complex process of controlled shade variation, the MaxiSoho® collection is born. **Unique profiles. Not two profiles are the same.**

With non-slip surfaces and available for outdoors. Maximum quality to protect and embellish tile ceramic.

Check the technical file for advice and recommendations of installation and use.

## ACCESSIBILITY & SAFETY SOLUTIONS

The European Construction Standards related to Accessibility and Safety are stricter every day, for both public and private buildings (common areas). At EMAC<sup>®</sup> we offer a complete range of solutions that meet this requirement, guaranteeing its functionality as well as giving an esthetical finish off.

Stair nosing with non-slip resistance and visual contrast colours for people with reduced visibility, transition profiles to avoid the difference of levels safely, non-slip strips to be installed in entrance ramps, podotactile buttons and tiles to signalize the presence of obstacles like stairs or similar, or photoluminescent profiles as complementary emergency signals....

A range in continuous development and growth to fulfil the increasing market demand on accessibility and safety resources.

# 06

Our Technical Department ([tecnico@amac.es](mailto:tecnico@amac.es)) may assist you choosing the most appropriate Novopeldaño<sup>®</sup> ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) referred to other regulatory Laws to the Accessibility and Security conditions, and the recommendations included in the Norm UNE 138002:2017 (General Regulations for the execution of wall and floor tiles by adhesion).

## Novopeldaño® Safety Plus

a: 44 mm  
AD: non-slip strip  
length: 1 / 2<sup>5</sup> m

Stair nosing profile made of anodized aluminum, to be installed during the tiling. This profile has a non-slip strip which helps to fulfill accessibility requirements and improves the slip resistance value of the flooring. This strip is available in contrast colors such as black, yellow/black, yellow or even grey if you want a more decorative finish. Ideal for both residential or commercial use.

## Novopeldaño® Safety

a: 65 mm  
AD: anti-slip strip  
length: 1 / 2<sup>5</sup> m

Non-slip stair nosing profile. Its wide striated surface and its non-slip strip fulfill with the most demanding safety standards, increasing the value of slip resistance of any flooring. It is installed after tiling. Ideal for public areas with heavy pedestrian (foot) traffic. Upon request, it can be delivered with countersunk holes for screw attachment.

## Novostrip

accessibility & safety

a: 9 mm  
b: 6 mm  
c: 2<sup>8</sup> mm  
length: 2<sup>5</sup> m

Profile made of extruded aluminium intended to be installed in stairs, ramps or passage areas with marble, terrazzo or similar floorings, to guarantee safety against eventual falls. Very easy to install. You will only need to make a groove by using a marble saw cutter, and then insert the profile into it. It is recommendable reinforcing the installation with adhesive. Due to its geometry and its small size, it can be installed alone or with other profiles forming a pattern.

## ENTRANCE MATS SOLUTIONS

The Novomat® entrance mats are an effective barrier to avoid the entry of dust, dampness and dirt, providing the maximum protection and durability to the flooring. Specially designed to contain dirt and prevent it from being tracked into the floors of public buildings: Airports, hospitals, hotels, offices, mall centres, shops, leisure venues...

Its robust aluminium structure connected by high resistant synthetic rubber joints that avoid noises and prevent from sliding. This joint system allows the mat to be rolled easily and facilitates the evacuation of dust and moisture.

Enabling commercial traffic and helping to save the accessibility standards for people with reduced mobility. Available in standards size kit including frame cut to measure or under request they can be customize at the desired geometry. With two possible different finishes, rubber or carpet in different colours.

We emphasize the possibility to customize the entrance mats- Novomat® 15 and Novomat® 20- even if it is new or it has been already installed with the logo or design previously requested, enhancing the visibility of the brand.

# 07

Our Technical Department (tecnico@emac.es) may assist you choosing the most appropriate profile ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the Norm UNE 13802:2017 (General Regulations for the execution of wall and floor tiles by adhesion).

**INSTALLATION:**

## Novomat® custom made

The **Novomat®** technical mats are an effective barrier to prevent from the entry of dust, moisture and dirt, offering the maximum protection and durability to the floorings.

These mats are custom made and can be adapted to any size or shape with an adjusted delivery term.

They are made of natural aluminum profiles connected by a high resistant synthetic rubber that acts like an acoustic isolator and favor the evacuation of dust and moisture. This joint also allows the mat to be easily rolled.

There are four models available with two different designs:

- **Novomat® 8** and **Novomat® 12** have a larger aluminium visible side. They are reinforced and their striated visible side increases the non-slip value. Specially designed to be installed on already finished surfaces.
- **Novomat® 15** and **Novomat® 20** have a narrow design to get a perfect integration. These models are ideal for areas with high pedestrian traffic like shopping malls or any kind of public buildings. Due to its narrow design and the height of the profiles, these mats are more capable to retain the dirt, resulting in cost savings of cleaning and maintenance.

There are two different finishes that can be combined.

- Textile carpet: 5 colors available: grey, anthracite, red, beige and tobacco. Suitable for indoor installations.
- Black rubber: Suitable for covered indoor and outdoor installations. Can be combined with textile carpet.\*

**HOW TO REQUEST A NOVOMAT<sup>®</sup> ENTRANCE MAT?**  
Ask EMAC<sup>®</sup> for an entrance mat order form. There are two options:

**option A REGULAR SHAPES**

1. Indicate the inside dimensions of the well or the mat dimensions (width A x depth B).
2. Indicate if the frame is needed.
3. Indicate if there are doors and their position in relation to the entrance mat.
4. Indicate the direction of the traffic flow.
5. Choose the height of the profile and the finish of the entrance mat.

**option B IRREGULAR SHAPES**

1. Do a drawing with the shape of the entrance mat and all its dimensions.
2. Indicate if the frame is needed.
3. Indicate if there are doors and their position in relation to the entrance mat.
4. Indicate the direction of the traffic flow.
5. Choose the height of the profile and the finish of the entrance mat.
6. A charge will be applied as appropriate depending on the features of the entrance mat requested.

The maximum delivery length is 3 meters. For larger sizes, the entrance mats are made in several pieces. We recommend not requesting the joint in the central area, as it is the area with more traffic. The best option is leaving the joints between the pieces nearest to the sides.

Our technical team is at your total disposal to help you with the election and sizing of the entrance mat.  
For more information please contact [tecnico@emac.es](mailto:tecnico@emac.es)

## EXPANSION JOINTS SOLUTIONS

Ceramic tiling must go together with expansion joint placing. Joints are discontinuous elements which allow dilatation and contraction flooring movements and they avoid both tension and damages that may occur due to thermal changes.

Novojunta<sup>®</sup> range is bound to cover the functional need of joints, adding beauty and elegance as all EMAC<sup>®</sup> profiles do. The selection of the correct model of Novojunta<sup>®</sup>, should take the following aspects in consideration: flooring material, thermal changes that the flooring will be exposed to and placing distance between joints.

# 08

Our Technical Department ([tecnico@emac.es](mailto:tecnico@emac.es)) may assist you choosing the most appropriate expansion joint, Novojunta<sup>®</sup>, ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the Norm UNE 138002:2017 (General Regulations for the execution of wall and floor tiles by adhesion).

## STRUCTURAL JOINTS SOLUTIONS

Construction elements such as flooring also require expansion joints to take up dimensional changes. The Spanish Technical Building Code (CTE) requires them to avoid continuous elements of more of 40m length.

EMAC<sup>®</sup> range of Novojunta<sup>®</sup> Pro has been designed to cover the need of structural joints in an elegant and long lasting way. This model absorbs the movements of slabs and prevents the fissure of the concrete. Specially indicated for great constructions such as shopping centres, airports, parking garage... and are already assembled and ready to install.

For the complete range of Joints, ask for our **Technical Catalog of Structural Joints**, where you can find more detailed solutions and technical information.

09

\*Resistance against fire during 240 minutes without failure

Our Technical Department ([tecnico@emac.es](mailto:tecnico@emac.es)) may assist you choosing the most appropriate structural joint, Novojunta<sup>®</sup>, ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the Norm UNE 138002:2017 (General Regulations for the execution of wall and floor tiles by adhesion).

Reg. 869888-5

## Novojunta® Pro Aluminium

Request our  
Technical Catalog of  
Structural Joints

This joint served **MOUNTED**. It consists of aluminum profiles drilled in its base with rubber insert high performance capable of supporting multidirectional movement., Excellent mechanical properties, weatherproof and UV rays. Replaceable rubber. They can be installed between floors at different heights. Available Lace firewall plates for alignment, replacement central reinforcement and membrane as models.

Aluminium + EPDM rubber	34 mm	58 mm	20 mm	2 u.	ribbed	black	NJPPS2058	65,82 €
	44 mm	68 mm					NJPPS2068	68,76 €

with a plastic film

## Complementary pieces Novojunta<sup>®</sup> Pro Aluminium and Perimetral

material	color	Nº	code	price/lm
Reinforcement 26 mm Aluminium	natural	11	NJPALRE26	11,76 €
Reinforcement 44 mm Aluminium	natural	11	NJPALRE44	18,38 €
Alignment (2 u. of 0'5 ml) Aluminium	natural	11	NJPALALI	5,91 €

**Reinforcement.** This piece improves the load capability and the whole piece's consistence. We recommend its use for joints with an a= 34 or 44 mm, please use the 26 mm reinforcement. For joints with an a= 59 mm, please use 44 mm reinforcement. (Only for models in h:35 mm and h:50 mm)

**Alignment.** It enables a correct and aligned placing of the Novojuntas between consecutive profiles, avoiding unnecessary wastage and efforts. (Only for models in h:35 mm and h:50 mm)

## Novomembrana

Membrane made of EPDM rubber with adhesive, to seal the expansion joints that require sealing. It can be installed as a complement for a system of profiles in expansion joints or as an individual product. This high quality membrane allows multidirectional movements, has a great elasticity, is watertight, resist extreme temperatures (-30°C / +120°C) and also resists diluted acids or concentrated acids (moderately), steam and hot water. In case of fire the product does not release toxic fumes.

material	width of membrane	wide board	packing	color	Nº	code	price/lm

## Novojunta® Pro Basic

Aluminium L-shaped profiles, perforated on their base to receive the fastenings with central insert of synthetic rubber with an excellent capacity to absorb multi-directional movements, great elasticity, resistant to damp, and extreme temperatures. The rubber parts are supplied. All the profiles and rubber parts in the series can be combined, ordered separately. They can be installed between pavings of different heights/ thicknesses, combining aluminium attachment flanges. The complete kit includes all fastenings. Firestop cord, and watertight optional.

## **new** Firestop cord

The firestop cords are part of the EMAC<sup>®</sup>'s family of fire barrier systems. The aim of these cords is to get tightness against flames, hot or flammable gases in expansion joints in case of fire, avoiding the chimney effect between construction elements both horizontal or vertical. These systems have been subjected to quality-control tests for vertical and horizontal movements according to the European Standard EN 13501-2:2016.\*

material	cord diameter	joint width	presentation	code	price/lm

## WHAT DO YOU NEED TO KNOW TO CHOOSE THE RIGHT JOINT?

### FUNDAMENTAL QUESTIONS THAT SHOULD BE ASKED

1. What width does the joint opening have?  
\_\_\_\_\_
2. What is the calculated movement that the structure will have?:  
\_\_\_\_\_
  - Horizontal movement
  - Vertical movement
3. Does it need to be watertight (for example underground car parks)?  
\_\_\_\_\_
4. What type of flooring will be installed?  
\_\_\_\_\_
5. What type of fixture does it need?  
\_\_\_\_\_
  - Flush
  - Overlaid (previously installed cladding)
6. What thickness does the cladding (h) have? (for flush-mounted joints)  
\_\_\_\_\_
7. Required load capacity. What mode of transport will pass over it?  
\_\_\_\_\_

8. Will the joint be in the exterior or the interior of the building?  
\_\_\_\_\_
9. Any possible presence of chemical agents?  
\_\_\_\_\_

## EVALUATION AND TECHNICAL STUDY WITH NO OBLIGATION

OUR TECHNICAL TEAM IS FULLY AT YOUR SERVICE TO RESOLVE YOUR DOUBTS OR PROVIDE THE TECHNICAL INFORMATION YOU NEED: TECHNICAL FILES, TRIAL CERTIFICATES, CAD DRAWINGS, CONSTRUCTION DETAILS, INSTALLATION INSTRUCTIONS AND SO ON.

IF YOU PREFER, WE WILL PROVIDE YOU WITH THE PLANS AND WE WILL ADVISE WITH THE CALCULATION AND DISTRIBUTION OF THE JOINTS NEEDED FOR YOUR PROJECT.

## JOINTS COVER SOLUTIONS

The Novotapajunta profiles are a simple and decorative solution to protect and hide structural and expansion joints on floors, walls or ceilings. They are made of aluminium and stainless steel, and are the ideal solution for places with high traffic like malls, hospitals, airports, etc.

The architectural knowledge, over the years, has led to a growing demand for structural joint solution that is suitable for different environments. The thermal variations or the risk that the seismic zones suffer, among others, make it necessary to create bigger structural dimensions.

# 10

Our Technical Department ([tecnico@emac.es](mailto:tecnico@emac.es)) may assist you choosing the most appropriate Novotapajuntas ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the **Norm UNE 138002:2017** (General Regulations for the execution of wall and floor tiles by adhesion).

## Novotapajuntas NDP PVC

length: 3 m

Profile made of PVC designed to protect and beautify joints in facades, walls, ceilings. Installs easily using the supplied stainless steel clips, avoiding the use of adhesives and fasteners. Its unique UV resistant formulation makes it suitable for both indoor facilities and outdoor. This profile is suitable for both new construction and for renovation and for all types of buildings such as hospitals, universities, schools... Models angle and plane.

## SANITARY AND HEALTH SOLUTIONS

The Novoescocia® and Novobañera profiles are specially designed to be placed in skirting and tiled corners. As cove corners and skirting are rounded, this avoids dirt and germ accumulation in difficult angles hard to clean. All models can be placed horizontally and vertically.

They are usually used in sanitary, medical, feeding or industrial areas where exhaustive hygiene and cleanliness conditions are required, or even domestic use. And for a perfect finish, complementary pieces are also available.

Standing out is our our range Novoescocia® with Antibacterial Technology, that offers an active and long lasting antimicrobial protection against more than 30 different bacteria (incl. Salmonella and Escherichia Coli), facilitating cleaning in bathrooms and kitchens for domestic use, and also hospitals, restaurants, schools, sport areas... The reduced overheads of these models allow discreetly integrating them in all type of skirting and tiled corners.

\* Technology for the Control of the Microbial Deterioration

# 11

Our Technical Department ([tecnico@emac.es](mailto:tecnico@emac.es)) may assist you choosing the most appropriate profile ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the **Norm UNE 138002:2017** (General Regulations for the execution of wall and floor tiles by adhesion). All Sanitary and Health EMAC® Solutions help to fulfill the CTE-DB-HS-Healthy (Spanish Technical Building Code) and the regulatory Laws referring to the hygienic and technical conditions of the sanitary and health establishments.

## OUTDOOR SOLUTIONS: FACADES, TERRACES AND SWIMMING POOLS

EMAC® offers a practical and aesthetic system with profiles that facilitate and assure a correct placing of ceramic on facades, prolonging the outdoor tiling's life thanks to its excellent performance against thermal crashes and base movements, and decorating at the same time. EMAC® facades system includes profiles for ceramic anchoring, perimeter finish off, movement joints and for balcony coverings.

Among these solutions, stands out the edging profiles has a broad visible side made of aluminium. It is ideal to finish off balconies and windowsills. The exclusive design of the eaves, grooved along its length, is more effective to channel the water away from the wall, preventing a run-off on the facade.

EMAC® recommends the use of flexible glue cement as fixing material, suitable to the environmental conditions. In Facades, the placement of Expansion Joints is recommended in areas not larger than 9 sqm maximum if size of the tile > 900 sqcm, and 12 sqm if size of the tiles < 900 sqcm.

Among these solutions, stands out the profile Novosepara Fix® that brings additional security to the facades by mechanical anchoring. In the conditions referred to the building security published in the ITE (Spanish Technical Inspection of Buildings) it is recapped in a very strictly way the aspects: security and stability of ceramic tiled facades.

# 12

Our Technical Department (tecnico@emac.es) may assist you choosing the most appropriate profile ensuring the correct application fulfilling the CTE (Spanish Technical Building Code) and the recommendations included in the Norm UNE 138002:2017 (General Regulations for the execution of wall and floor tiles by adhesion).

## EMAC® DESIGN AND DEVELOPMENT

EMAC® has its own R&D team that designs, develops and improves trims for the sole purpose of satisfying our customers' requirements. The EMAC® R&D department is made up of professionals with an extensive experience and excellent technical skills who are constantly learning and fully committed to the project. The team, backed by significant investment in collaboration with ground-breaking technology institutes, is able to provide technically competitive products of high quality.

The department has the latest rapid prototyping machine in the market that allow us testing the prototypes before its final development, reducing periods of execution and detect possible improvements. Once the products are manufactured, they are subjected to various tests that guaranty their maximum quality and functionality fulfilling the current normative.

In the past years, we have carried out tests of traction-compression, loading, corrosion, alloy compositions, slip resistance, stain resistance, abrasion resistance...

\*Rapid Prototyping Machine

The careful choice of materials with which EMAC® profiles are manufactured is the main reason for the high quality of these products. Comprehensive tests are carried out, at EMAC® and/or Specialized Technical Intitutes, on their composition, strength, colour and other factors. EMAC® profiles are made of high quality raw materials such as Stainless steel AISI 304, Aluminium (Qualicoat, Qualanoad), PVC, Maxi, methacrylate, wood or brass. Check the technical details of each material at the technical files of each product.

Investing in protecting our effort of Research, Development and Innovation with more than 65 industrial designs protected and more than 30 brands registered by which our most popular product ranges are known. All of this is done in order to protect our products and the value of our brand, which is deeply consolidated in the market.

All of our products have their Technical File. Where you can find general information, technical details, tests carried out, methods for fitting them and guidelines for maintaining and cleaning each one of them. Pay special attention to the information contained in the Technical File to avoid damaging the products and to keep up proper maintenance.

## TECHNICAL SUPPORT

At EMAC® we want to help you carry out your Project by choosing always the best solutions. If you have any queries or requests about our products, do not hesitate to contact us at [tecnico@emac.es](mailto:tecnico@emac.es) and tell us about your project. Our technical department staff will assist you with professionalism and without delay. They are always at your disposal and without any compromise. We offer you our help with:

- Project plans: personalized and calculated study on the most suitable layout of expansion joints.
- Advise on rehabilitation and renovation works.
- Troubleshooting for structural joints.
- General enquiries: functionality, cleaning, fitting, etc. of our products

In our interest to share our knowledge and promote skills between the professionals in the sector, we have developed several technical documents that are at your disposal. At this Technical Documents, we cover topics of interest such as how to fit expansion joints on facades, the concept of slip and how it is applied according to the CTE standards, and supporting documents to choose the perfect EMAC® solution for expansion joints.

At the same time, to offer you a more detailed information you may find a Technical File for each product and material. In which you can find general information, technical details, tests carried out, methods for fitting them and guidelines for maintaining and cleaning each one of them. Pay special attention to the information contained in the Technical File to avoid damaging the products and to keep up proper maintenance.

You can download the Technical Files at our website [www.emac.es](http://www.emac.es), you can consult the information about each product at our online catalogue or ask for that information by e-mail at: [tecnico@emac.es](mailto:tecnico@emac.es).

**TERM OF SALES**

These sales terms and conditions are for all the EMAC® group orders. Any client that sends an order to EMAC® Group is accepting the general sales conditions mention previously.

- **GENERAL CONDITIONS.** Prices are given in Euros and per linear meter (€/lm). Taxes not included.
- **TRANSPORT.** All the prices from the pricelist are Ex-Works. The goods travel to the risk and dangers of the purchaser. We can deliver your order in Castellón area (Spain) to make your shipment easier for only six euros more. For two euros we create a special package to protect your profiles to the max during transportation.

We may assist you with the freight at your convenience. The merchandise travels at the buyer's risk. EMAC® does not become responsible for damages, lost or delays suffered by the merchandise during the transport.

- **CLAIMS.** Buyer should check the material carefully at reception. Claims will not be admitted once the material has been placed and installed. All the information contained in this document is just to be considered as a guide, not contractual; and therefore it cannot be taken as guarantee or be used for claims.

Tones and colors described in this document are purely indicative and may vary for reasons of production.

**No changes or returns allowed.**

- **RESPONSIBILITY.** EMAC® does not become responsible for the final use of the material. For enquiries about uses and applications, please do not hesitate to contact our commercial department and our technical office. It will be a pleasure helping you with any technical question. There is no guarantee for the use of the material with an specific purpose. The catalogues, advertisements and all the promotional material from EMAC® are merely of guideline character, so cannot be taken neither as guarantee or basis of complain.
- **DEFAULT.** Should the client breach the agreed conditions and/or the non-payment of an invoice from the EMAC® Group will result in the immediate maturity of all the pending debts of the debtor and automatically we will be able to cancel any supply or delivery, without the possibility of the purchaser to go backwards or ask for any compensation. Should the purchaser fail to comply with the terms of payment with any company of the Group, will lead into our right to automatically modify its sales terms and conditions.

EMAC® does not warranty the availability or accuracy of the information in the pricelist and reserves the right to modify the published information without prior notice.

EMAC® reserves the right to modify at any time the information from the website or in its configuration and presentation.

It is disclaimed any liability arise from the improper or illicit use of the information appearing on the website.

- **INTELLECTUAL PROPERTY.** The pricelist, Website and all their contents are property of Emac Complementos, S.L. and are protected by the Spanish legislation about Intellectual and Industrial Property Rights in favor of the Company.

Nuria, Emi and Laura Boix - EMAC® Group Managers

## At EMAC® Group we care about people.

One of the characteristics that identifies our company is our concern with people and social responsibility, because social and humanitarian concerns are not indifferent to us. And our main objective is to add value to the development of society and contribute to its well-being. From EMAC® Group we demonstrate our compromise through various initiatives and **projects in favor of health, education, sport and social integration** among others. Collaborating with Associations like Apival, dedicated to the labor insertion of people with disabilities and/or dependents; with AFACO, association who's objective is the social inclusivity of people with functional diversity, and with the Foundation Vicente Ferrer, contributing in the construction of schools and decent housings in one of the poorest regions of India. Additionally, EMAC® is part of the initiative from "Companies with Value" defraying the costs of "The Charity House" in its different areas. In addition, in the sporty field, EMAC® collaborates as a sponsorship of the Tatami Rugby Club Valencia, managed by Matias Tudela and César Sempere, professional Olympians that promote the values of sport and team work.

We share all these values and promote them day by day under the perspective to generate quality in our environment and give back what society is giving us.
